

BARREL TOP

SEPARATOR WITH
EXTRACTOR

The Barrel Top Separator is a mobile wet separator available in galvanized or stainless steel. The extractor hose has a 1/2" water hose inside to feed water or shampoo into the stainless steel extractor nozzle. Simply spray surface and vacuum. This separator is ideal for collecting extracted liquids from carpet or cloth surfaces. This separator connects to your central system with a jumper hose and optional gate valve. A ball valve at the base of the separator allows easy draining.
